TECHNICAL PROJECTS

Capstone / The Online Gallery | Back-end Developer/SCRUM Master | 09/2023 | [Capstone Project](#)

- Collaborated internationally to develop a dynamic web app for browsing products and managing carts.
- Implemented admin dashboard for efficient product and user management.
- Utilized React, Vite, PGAdmin4, and Postman for database seeding and testing.
- Developed Express routes with robust error handling and Bcrypt for data security.
- Enhanced UI with TailwindCSS and DaisyUI.

JuiceBox | FullStack Developer | 09/2023 | [JuiceBox](#)

- Designed and implemented a CRUD API for a Tumblr-like blogging platform using Express.js and PostgreSQL.
- Reconstructed database schema and secured authentication with JWT and bcrypt.
- Built a responsive SPA with React.js, deployed on Netlify.

Stranger's Things | Front-End Developer | 08/2023 | [Stranger's Things](#)

- Developed front-end and routes for an online marketplace using ChakraUI and React Router.
- Utilized AJAX for asynchronous data fetching and error handling.
- Created well-structured React components and implemented state management.

Puppy Bowl React | Front-End Developer | 08/2023 | [Puppy Bowl React](#)

Web Application designed to allow users to view, select, delete and search through a roster of puppy bowl players.

- Enhanced user experience for a web app featuring a roster of puppy bowl players.
- Built React components, implemented error handling, and optimized performance.
- Improved UI with CSS and created efficient API routes for data management.

EXPERIENCE
